APPLICATION

The STA-CF980 Series is a complete modular designed case erecting machine that automatically takes the cases from the vertical magazine position and folds and tapes the bottom flaps. Once the case is shaped, it is retained on the outlet platform for filling. For larger cases, the STA-CF1500 model will perform the same process.

Even with light cardboard, case erecting is carried out perfectly due to a patented blocking system that forms the case on three sides. Any interference from the flaps during folding is eliminated.

EXCLUSIVE STA TAPE HEAD

The patented STA taping head design is uniquely engineered to maintain consistent pressure to the tape to ensure the most secure, reliable seal possible. Our new line of interchangeable pressure sensitive taping heads are offered in a variety of tab lengths and tape widths to fit your application.

For the best results, rely on STA Proven Performance acrylic tapes, for use with your high-throughput automatic sealing machines. Together, you have the most reliable single source tape sealing system.
